

ISOcat tutorial

Hands-on session

Supported browsers

- Internet Explorer 7 and 8
 - IE 8 is regularly tested
- Firefox 3 and higher
 - Firefox 3.5 is regularly tested
 - Firefox 3.6 is having some rendering problems leading to weird behavior with scrollbars
- Google Chrome 4
 - Is regularly tested
- Safari 3.2.2 and 4
 - Untested

Known issues

- Large DCSs/profiles are rendering too slow, especially in the tree view
- DCSs aren't locked, i.e., if updated concurrently an update might get lost
- Support for profile value domains is currently incomplete, i.e., you can't manage to which profile value domains a simple DC is assigned

Coming soon

- A forum to discuss data categories
 - Will also provide a way to contact the owner of a data category or a member of a TDG
- DCIF import
 - Bulk import of large collections of data categories
 - Managed by the ISOcat system administration
- Public DCs will become (partially) read only
 - Only additional language/linguistic sections can be added
 - Otherwise editing will be done on a copy with a new version and a new PID
 - This copy may eventually supersede the existing public DC
- Support for the standardization process
 - Initial focus of profiles will switch to standardized DCs
